

ACTIVITY FOR MARCH 3RD - CLUSTER PART 2

Our goal is to practice using clustering to explore trends in data.

- Decide on a sport your group wishes to investigate.
- Decide if you want to investigate teams or individuals from that sport.
- Get data from that sport. (Webscraping or downloading csv files.)
- Determine two variables that represent the most important attributes of the sport. These could be variables in the data you downloaded or variables you created from the data.
- Cluster the teams (or individuals) the sport using a 2d-plot. You will need to determine how many clusters to use.
- Identify and label the clusters with an appropriate label.

Each group submits one RMD file to *3/3 Activity - Cluster part 2* assignment box in D2L. It is due at the end of class on March 3rd. Be sure to include any csv file your group used.
