

## R ASSIGNMENT 4 - NCAA POSTSEASON

This is a continuation of the Dataframes Day 2 activity.

- In the RMD file your group submits, be sure it includes all the code necessary to get the data, clean up the data, and put the data in a dataframe in R for the NCAA sport your group chose above.
- In the RMD file your group submits, be sure it includes the formula for the metric your group created above.
- Twenty percent of the teams in your sport will be invited to a postseason tournament. You will use the metric you created above to decide who those teams are with the additional rules:
  - Every conference must have at least one team represent their conference in the tournament.
  - No conference can have half (or more) of their teams in the tournament.

Create a new dataframe called **PostSeason** that includes only the teams invited to the tournament, their conference affiliation, and their metric value.

When your group is finished, turn in a copy of the groups R-notebook (RMD file) to the *R Assignment 4 - NCAA Postseason* assignment in Gradescope. It is due on Friday, February 21st, at 11:59pm.
