Regression in Other Sports Activity

Our goal is to perform an analysis similar to the one we performed in *Baseball runs part 1* on another sport. Can we identify a statistic that is the best predictor or scoring? (or best explains scoring?)

- Choose a sport among: College Basketball, NBA, College Football, NFL, NHL, or Soccer.

- Find data for your sport. A great reference is:
  https://www.sports-reference.com/

- Download the appropriate data. (CSVs work well.)

- Load the data into R.

- Perform your analysis on the data.

When your group is finished, turn in a copy of the groups RMD file and data to the appropriate Gradescope assignment.
